

Southcentral U. S.

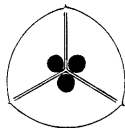

*Sapindus saponaria*

50 yrs

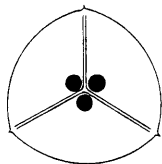

*Koelreuteria paniculata*

20-50 yrs

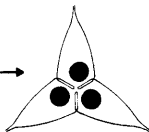

*Cardiospermum halicacabum*

Florida

*Cardiospermum corindum*

20-45 yrs

*Koelreuteria elegans*

FIG. 3. Proposed colonization histories for bug populations moving from the fruits of two native host species to those of three introduced host species. The time periods estimate the intervals between when the new hosts became common, and the present.
